Available resources	coffe, the uses of html, python, mongoDB, postman, css, arra, tools as visual studio code	
Best Agile methodology	Scrum	a good participation from the whole team

Project Analysis – GoLocal Calvillo

Project size: Medium
Duration: Around 1 month
Team members: 4 students
Scope: A web and mobile platform that promotes tourism in Calvillo by showcasing local attractions, cultural events, and small businesses. It connects tourists with local guides and provides authentic local experiences.

Justification:
We selected Scrum as the Agile methodology for GoLocal Calvillo. Since our project duration is only one month and our team consists of four members, we need a flexible and efficient approach that helps us organize tasks and deliver quick results. Scrum allows us to divide the work into short sprints, evaluate our progress each week, and adapt based on feedback from users and local businesses.
